2. Get your Busuu credentials	4

1. Integration overview

The standard connector between 360Learning and Busuu provides the following features:

Integration setup

- The connector is set on a given group of your organization. It is not necessarily the top-level group. We will call this group **the synchronized group**
- **Prerequisites:**
 - For statistics synchronization, the user email addresses must be an **exact** (be mindful of this if you are including aliases)

Catalogue synchronization

- All Busuu languages available to your organization are retrieved
- The languages are automatically updated when a new one is released (last update June 2021)
- The Busuu Languages are modelled as 360Learning courses. Their original title and description cannot be modified

Use of Busuu courses

- All Busuu languages are added by default to the **synchronized group** catalogue and library
- As a consequence, the Busuu languages can be found for learners in the 360Learning catalogue as well as via the search tool
- The Busuu languages can be included in Program Sessions in your 360Learning platform
- When users select a Busuu language, the course presentation page is displayed. When the START button is clicked, they are sent to the Busuu platform where the content is consumed
- Busuu is responsible for granting or refusing access to the content to users
- If the Busuu languages was started as a part of a program session, the learner is automatically allowed to continue the program session

Learning statistics

- The learning statistics are received daily through the Busuu API
- The following information is available:
 - Time spent per language
 - The date and time at which the Learner last interacted with Busuu
- This information is available for the given course in the dashboard section in your 360Learning platform

2. Get your Busuu credentials

You need to create and retrieve the API keys from your Busuu Customer Success representative.
