Check that the API access is enabled	4

# 1. Integration overview

The standard connector between 360Learning and Udemy provides the following features:

## Integration setup

- The connector is set on a given group of your organisation. It is not necessarily the top level group. We will call this group **the synchronized group**

## Catalog synchronisation

- All Udemy courses available to your organization are retrieved through the Udemy API
- The Udemy courses are automatically updated on a daily basis
- The Udemy courses are modeled as 360Learning courses. Their original title and description can not be modified
- Skills may be added to Udemy courses

## Use of Udemy courses

- All Udemy courses are added by default to the **synchronized group** and all public subgroups catalog and library
- As a consequence, the Udemy courses can be found for learners in the 360Learning catalog as well as via the search tool
- The Udemy courses can be included in Program Sessions in your 360Learning platform
- When users select a Udemy course, the course presentation page is displayed. When the START button is clicked , they are sent to the Udemy platform where the content is consumed
- Udemy is responsible for granting or refusing access to the content to users
- If the Udemy course was started as a part of a program session, the learner is automatically allowed to continue the program session

## Learning statistics

- The learning statistics are retrieved on a daily basis for your 360Learning users
- The following details are available:
  - user progress (from 0 to 100%)
  - last activity date
- Learning statistics for Udemy courses are included in the dashboard section in your 360Learning platform

## 2. Get your Udemy credentials

No development is necessary on your side to setup the Udemy connector.

You just need to request the API access to be activated in your Udemy For Business platform.

Please collect the following information:

- **client\_id** : will be provided by your Udemy customer support
- **client\_secret**: will be provided by your Udemy customer support
- **organization\_name**: is the first part of your url when you log into Udemy For Business.

Example: if <https://myorganization.udemy.com> is your Udemy learning portal url, "myorganization" is your organization name.

- **organization\_id** : will be found at the following url:  
[https://{organization\\_name}.udemy.com/developers/organization/reporting/](https://{organization_name}.udemy.com/developers/organization/reporting/)  
the organization\_id is mentioned as the account\_id in this web page.

### Your API Client and Your Account Id

Udemy API requires basic authentication parameters to validate the client. The auth parameters have to be sent in every call or you will get a **401 UNAUTHORIZED** error.

To send authenticated requests, provide the **client\_id** and **client\_secret** values as a base64 encoded **HTTP Authorization** header.

You will also need your **account\_id**.

Once available:

- send this four values to your 360Learning technical engineer.
- Precise to which group you want the integration to be set

## Check that the API access is enabled

In the following url:

[https://{organization\\_name}.udemy.com/organization-manage/integration/](https://{organization_name}.udemy.com/organization-manage/integration/)

You should see the API enabled like this:

## Settings

User Access

## Integration

### Workplace

#### Share Button

Share your favorite courses with your team. Display a "Share to Workplace" button on all course landing pages so your team can easily recommend courses to groups, individuals, or your entire organization.

Off

#### Udemybot

Spread awareness on the best courses to your organization. The Udemybot will automatically post a weekly summary of the most popular courses in your organization to a Workplace group of your choosing.

Install

### API Integrations

Reporting API - Enabled

The Udemy for Business Reporting API has been enabled for your Learning Account.

Please check the API documentation

Courses API - Enabled

The Udemy for Business Courses API has been enabled for your Learning Account.

Please check the API documentation
